

List_studies sheet

Nb: row number

Study_id: one id per study per study species per study site

Study: reference from Endnote

Species_name: accepted latin name of the study species

Study_method: Field study in natural habitats / Field study in semi-natural habitats /

Laboratory study

Study_design: Observational study / Experimental study

Dispersal_method: Direct observations / CMR (Mark-recapture) / Genetic methods /

Dispersal traps / Removal grid / Metapopulation approach (see main text of the ms for more explanations)

Study_scale: maximum dispersal distance possible (in meters) = range of the study area

Study_population: Continuous population / Fragmented population / Continuous and fragmented population (mixture)

Study_zone: study continental zone

Study_area: study country
