

Timestamp	Has the way you engage with the "field" changed over the course of this program?	How did this overnight trip compare to your first overnight trip?
	I think I became even more involved this time around than other "field" research trips. So I would say yes, my engagement has increased to become more involved and spot more detailed patterns.	I would say this one was the most fun. The warmth of the cabin, setting of the beach, and plethora of time for exploration made it much more engaging to me. Interestingly enough, some classmates couldn't make it so our group was much smaller than normal. However this felt much better because a smaller group instantly became more talkative and relaxed.
	yes, i notice more patterns in nature and know how i could study it if i wanted to	both were fun, big creek was a bit prettier and more exciting because it had more biodiversity
	Yes	Much more friendly with others, great sense of community. Much better at researching and conducting research.
	yes, I had zero experience with it prior so this activity taught me a lot about different routes I could take career wise! working outside	I enjoyed this one more cause we were right by a lake, and had more free time. it was beautiful
	I think that I am a lot better at noticing patterns and conducting basic research because of this program.	This trip was a lot better because it was warmer, and we were much more comfortable as a group. We also had access to some very nice facilities, which proved very helpful.
	Over the course I have gained more respect for what people in the field do	This overnight trip was a lot more fun, except for the rain
	Yes, I think I have become more attentive for patterns and reoccurring tendencies that the natural world has.	This overnight was a lot more enjoyable and overall more engaging. It could have been the location or simply having time to appreciate and acclimate to the area but it felt like there was a lot more to engage with.
