

Evaluating Species Delimitation Methods in Radiations: The Land Snail *Albinaria cretensis* complex on Crete

Sonja Bamberger, Jie Xu, Bernhard Hausdorf

Systematic Biology

Supplementary Fig. S2.
Maximum likelihood tree of the *Albinaria cretensis* group based on concatenated sequences of 4270 loci of 142 specimens (including two outgroup specimens). Species names refer to secondary species hypotheses. Bootstrap values above 50 are indicated at the branches. Encircled numbers refer to populations and colours refer to secondary species hypotheses (see Figs 1–2 and Supplementary Table S1 available on Dryad).
